                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                          Stapleton, M., Broketein, P., Hong, L., Agbayani, A., Carlson, J., Chavez, C., Dorsett, V., Farfan, D., Frise, B., George, R., Champe, M., Chavez, C., Dorsett, V., Farfan, D., Frise, B., George, R., Champe, M., Chavez, C., Dorsett, V., Farfan, D., Frise, B., George, R., Gonzalez, M., Guarin, H., Li, P., Liao, G., Miranda, A., Mungall, C.J., Nunco, J., Pacleb, J., Paragas, V., Park, S., Phouanenavong, S., Wan, K., Yu, C., Lewis, S.B., Rubin, G.M. and Celniker, S., Phouanenavong, S., Wan, K., Yu, C., Lewis, S.B., Rubin, G.M. and Celniker, S., Diniect Submission

AL Submitted (10-AUG-2011) Berkeley Drosophila Genome Project, Lawrence Berkeley National Laboratory, One Cyclotron Road, Berkeley, CA 94720, USA Sequence Submitted by:
Berkeley, CA 94720, USA Sequence Berkeley National Laboratory
Berkeley, CA 94720, USA Sequence of a polyd rail and contiguity
Berkeley, CA 94720, The sequence of a polyd rail and contiguity
Berkeley, CA 94720, The sequence of a polyd tail and contiguity
within 100 kb in the sequence of a polyd tail and contiguity
within 100 kb in the sequence of a polyd tail and contiguity
within 100 kb in the sequence Thus we believe the sequence accuracy, presence of a polyd tail and contiguity
within 100 kb in the sequence that we believe the sequence accuracy, presence of a polyd tail and contiguity
within 100 kb in the sequence thus we believe the sequence to reflect accurately this particular cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcription of unspliced precursor RNAs, and reverse transcription and relationship to other sequences, please visit our Web site (http://fruitfly.berkeley.edu) or send email to contamped the sequences and relationship of Other sequences and email to contamped the sequences and email to sequences and enails of the sequences and emails of the sequences and emails to sequences and emails of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /codon_gtart=1

                                                                                                                                                                                                                                                                                                                                                                      CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the
                                                                                                                                                                                                                                                                                           gc-help@bcm.tmc.edu
```

COMMENT

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

(More Acids Res. 25:3389-3402) similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

NOTE: This is a "working draft" sequence. It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are unknown.
This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                           NOTE: This is a 'working draft' sequence. It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DB 14; Length 84419;

Submitted (08-NOV-2001) Berkeley Drosophila Genome Project, MS 64-121, Lawrence Berkeley National Laboratory, One Cyclotron Road, Berkeley, CA 94720, US Sequence submitted by:

Sequence submitted by:

Berkeley Drosophila Genome Project
Lawrence Berkeley Inational Laboratory, MS 64-121
Berkeley CA 94720

This sequence was assembled using end sequences from a whole genome shotgun and from subclones of this BAC and its neighboring clones. For further information about this sequence, including its location and relationship to other sequences, please visit our sequence archive Web site (http://www.fruitfly.org/sequence/) or send email to bdgp@fruitfly.berkeley.edu.

New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.

Claim 1; SEQ ID NO 2207; 21pp + Sequence Listing; English.

18 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention

The invention relates to novel Drosophila species DNA sequences and their encoded proteins with their corresponding human homologues. The proteins or their encoding polymucleotides are useful in a method of prevention, treatment or diagnosis of a disease are useful in a method of prevention, treatment or diagnosis of a disease in an individual, and used to identify a substance capable of binding to the polypeptide or modulating comparison of the polypeptide comprising incubating the polypeptide. The compositions are administered to an individual in need of such treatment. The method of diagnosis, in which the presence or absence of a polymucleotide is detected in a biological sample, comprises brining the biological sample containing the nucleic acid such as DNA or contact with a probe comprising a fragment of at least 15 nucleotides of the polymucleotide, and detecting any duplex formed between the probe and nucleic acid in the sample. The method also comprises providing an antibody capable of binding to the polymeptide, incubating a biological sample with the antibody to allow the formation of an antibody-antigen complex, and determining whether antibody-antigen complex comprises unch as cancer. The antibody to allow the formation of an antibody-antigen complex, and determining whether antibody-antigen complex comprises and a cancer. The antibody to allow the formation of and/or regulating a cell division cycle function of a polypeptide and/or regulating and rheumatoid arthritis, and dermatological disorders such as sportasis, inflammatory, fungal, and parasitic disorders such as such as psortasis, inflammatory, fungal, and parasitic disorders such as psortasis, inflammatory, this sequence represents one of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New Drosophila polypeptides and polynucleotides, useful for diagnosing, preventing and/or treating disorders, such as cancer, glomerulonephritis, rheumatoid arthritis, psoriasis, malaria, emphysema and alopecia.
                                                                                                                                                                                                             antirheumatic; antiarthritic; dermatological; antipsoriatic; antiinflammatory; fungicide; gene therapy; Drosophila; diagnosis; cardiovascular disorder; autoimmune disease; glomerulonephritis; rheumatoid arthritis; dermatological disorder; psoriasis; inflammatory disorder; malaria; emphysema; alopecia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              455
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ATCTACGACTAACGGAACTCCTCCTGCAAGCAGTGGAAGTTGCTGTCCATCAAGCAGTAC 575
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating call signalling and cell-call interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL3611), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1599 AGCCAGCGGGCTGCCTTTTTCCTTTTTGCTTGCCAGACGCAACGAAAACGACA

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLi6176-ABL30511), expressed DNA ABGA2072). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell GTAGTGAGGGAGGTGAATCGCATGAAGGAGCAGAGGAAAGCGAAGGGTTCGCCAGGCG GAGATGAAGGAGAAGGTGGCGCTGATGAACCAGGATCCGGGCAATCCAAACTGGGAG GAACAGCTCCAGGAGGAAGGATGCACTGCGTCGCAATAATCCGGGGGAATCCCAACTGGGAG GCATTGAAAGAGGTGGAGCGACTGAAGGAGAATCGCGAGAAGCGACGCCCCGACAGGCC Gaps Drosophila melanogaster expressed polynucleotide SEQ ID NO 10583 developmental biology; cell signalling; insecticide, 12; Length 2190; Sequence 2190 BP; 586 A; 574 C; 626 G; 404 T; 0 U; 0 Other; Claim 1; SEQ ID NO 10583; 21pp + Sequence Listing; English.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating call signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB77737-ABB72072). The sequence for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GCATTGAAAGAGGTGGAGCGACTGAAGGAGAATCGCGAGAAGCGACGCGCCCGACAGGCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1602
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1431
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TCGATGACCATCAGATCACAGTGTGCGTGCGCAAGCGTCCCATTAGCCGCAAGGAGGTCA 1542
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signailing and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB27137-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1312 AGCGACTGAAGGAGAATCGCGAGAAGCGACGACGCCCGACAGGCCGAGATGAAGGAGGAGAAGA 1371
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      989

1311 2455 2454 GGGAGCAGGGGAAGAACGAAGATCCGGGAAATCCCCAACTGGGAAGTAGCCAGAATGATAC 2395 GCGAATATCAGAGCACGCTGGAATTTGTGCCGCTGCTCGATGG------CCAGGCCG 1482 1602 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABBS7737-ABR2072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell 2514 AAAGAATGCGAAAAGAACGGAACGGAGAGCGAGAAGCACAAGCCAGGACTCGTCTAGATC cceccaccaccaccaccecccccacracacaca--caagargargargacaccagecra 1312 AGCGACTGAAGGAGAATCGCGAGAAGCGACGCCCCGACAGGCCGAGATGAAGGAGGAGA TCGATGACCATCAGATCACAGTGTGCGTGCGCAAGCGTCCCATTAGCCGCAAGGAGGTCA 1543 ATCGCAAGGAGATCGATGTCATTTCGGTGCCGCGCAAGGACATGCTCATCGTGCACGAGC **AGGTGGCGCTGATGAACCAGGATCCGGCCAATCCAAACTGGGAGACGGCGCGAAATGATAC** Gaps 17; Length 3970; Sequence 3970 BP; 969 A; 935 C; 968 G; 1098 T; 0 U; 0 Other; Claim 1; SEQ ID NO 11978; 21pp + Sequence Listing; English.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CCCGAATGATTAAAGAATTTCGGGCTACTTTGGAATGTCATCCACTTACTATGACTGATC 195
                                                                                                                                                                                                                                                                                                                                                                                                                New human MCAK (mitotic centromere-associated kinesin) protein useful in identifying agents for use in the treatment of cellular proliferation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human MCAK (mitotic centromere-associated kinesin) protein, and its fragments that comprise a motor domain and directly or indirectly produce ADP or phosphate. The MCAK enzyme and its fragments are used in methods to identify compounds that modulate their activity. Modulators of MCAK are useful as therapeutic agents for treating cellular proliferation disorders such as cancer, hyperplasiss, restenosis, cardiac hypertrophy, immune disorders, inflammation, autoimmune disease, arthritis, graft rejection, inflammatory bowel disease. The present sequence is a human MCAK fragment encoding DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TGAAAGAGGTGGAGCGACTGAAGGAGAATCGCGAGAAGCGACGCGCCCGACAGGCCGAGA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to the isolation of polynucleotide sequences encoding fragments of human motor protein, mitotic centromere-associated kinesin (MCAK). The MCAK enzyme fragments have microtubulestimulated Arbase activity. The invention also discloses methods for the use of the motor protein fragments. The methods and compositions are useful for high throughput screening systems for identifying compounds useful in the treatment of cellular proliferation disorders, such as cancer, autoimmune disease, arthritis, inflammatory bowel disease, keloids, psoriasis and tumours. The present sequence encodes a human MCAK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CCCGAATGATTAAAGAATTTCGGGCTACTTTGGAATGTCATCCACTTACTATGACTGATC 195
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides novel mitotic centromere-associated kinesin (MCAK) polypeptides and their encoding polynucleotides. The invernion is useful for treating cellular proliferative diseases such as cancer, hyperplasia, restenosis, cardiac hypertrophy, immune disorders and inflammation. The invention also acts as a cytostatic and vasotropic agent. The present sequence is human mitotic centromere-associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TGAAGGAGAGAAGTGGCGCTGATGAACCAGGATCCGGGCAATCCAAACTGGGAGACGG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human MCAK (mitotic centromere-associated kinesin) protein, and its fragments that comprise a motor domain and directly or indirectly produce ADP or phosphate. The MCAK enzyme and its fragments are used in methods to identify compounds that modulate their activity. Modulators of MCAK are useful as therapeutic agents for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders, inflammation, autoimmune disease, arthritis, graft rejection, inflammation, disease. The present sequence is a human MCAK fragment encoding DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        375
